Let's Start!

The Most Common Language to Write Web Pages

Learning Outcome:

Describe common simple incidents at work in a simple spoken or written situation with a supportive interlocutor. Assess the incident of data in the macrosystem processes, based on the data dictionary to consolidate intervening data, based in established parameters.

Can Do Statements:

- I can simply say what HTML is.
- I can discuss the use of HTML tags.
- I can talk about the use of cascading style sheets, CSS, in a web page.

Ask your partner:

- How do people design web pages?
- What web pages do you consider have a great design?

Let's Explore!

Today's class is about HTML.

Instructions: Read the text below.

Professor: Hello, everyone. Last class, we talked about something very important. Do you remember, Amanda?

Amanda: Not really, I didn't come last class.

Professor: Oh, that's true. Well, Amanda, we learned about HTML. Do you know what that is?

Amanda: Yes, I do. HTML stands for HyperText Markup Language. And, I also know that we use HTML to write and design web pages.

Professor: Correct. You also need to know that the link between HTML documents is what we call HyperText; and, Markup Language means that we use HTML to mark up a text document with tags in order to tell our browser how to structure it.

Amanda: I didn't know that, professor. What is the topic for today's class?

Professor: Today, we need to talk about the use of HTML tags. We didn't have the chance to go over that topic but it is very simple. Did anyone search for information about HTML tags?

Amanda: I did, professor. I found that we can use HTML tags to format texts or images in order to build appealing websites. I didn't write down all the HTML tags on my notebook because there are too many, but I have a list of the most common ones.

Professor: Great! Please, share that list with your classmates.

Amanda: Of course. But before that, I also found that we can complement HTML tags with something called Cascading Style Sheets or CSS. Do you know what they are, professor?

Professor: Well, we use CSS to specify various attributes for the HTML tags. Programmers usually use CSS to specify the number of style properties for HTML elements. These properties have a name and transmit a value; you can separate them with a colon; however, if it is a property declaration, you use a semicolon.

Let's Practice!

HTLM Tags

Instructions: Write down the missing word. Use: gives, have, use.

1. We _____ HTML tags to format texts or images in order to build appealing websites.
2. An HTML tag _____ format to the text.
3. HTML tags _____ angle braces.

Let's Practice!

What did we learn about Cascading Style Sheets?

Instructions: Complete the sentences by writing its corresponding word. Use capital letter where necessary. Use: presented, thought, separated.

1. Last class, we _____ out that we could complement HTML tags with something called Cascading Style Sheets or CSS.
 - a. finds
 - b. found
 - c. find
 - d. finding
2. We _____ CSS to specify various attributes for the HTML tags in the web page we designed.
 - a. use
 - b. using
 - c. uses
 - d. used
3. I _____ the names and values with a semicolon; I used a colon.
 - a. didn't separated
 - b. don't separate
 - c. doesn't separate
 - d. didn't separate

Extension Activity

Let's design a website.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search on the internet HTML tags.
- On a piece of paper, write down any text (you can copy it from somewhere else) and use the tags you found online to personalize it.
- Share your text with the class.

Self-Assessment

Yes

No

- I search HTML tags.
- I create an HTML text.
- I share my text with the class.

☐	☐
☐	☐

Target Words

- **transmit** (verb): to pass information from one to another
e.g. These properties have a name and transmit a value.
- **HTML tag** (noun): individual component of a web page that tells the browser that is reading a text editor
e.g. We need to talk about the use of HTML tags.
- **link** (noun): a word in a computer document that moves to another part of the document or to another document by clicking on it
e.g. You also need to know that the link between HTML documents is what we call HyperText.
- **language** (noun): figures or characters used to communicate with a computer
e.g. HTML stands for HyperText Markup Language.
- **build** (verb): to develop something
e.g. We can use HTML tags to format texts or images in order to build appealing websites.

Learning Points

Simple past Tense in Affirmative and Negative Statements with Both Regular and Irregular Verbs

We use **simple past** to talk about actions that started and finished in a specific moment in the past.

Affirmative Statements

In order to create **affirmative statements** in **simple past**, you need to take into account if the verb is **regular** or **irregular**.

Regular verbs are those that end in **-ed** when they are in their past form regardless of the subject. Let's take a look at the following chart:

Verb	Verb in Past	Example
Design	Designed	<i>I designed a web page last month.</i>
Start	Started	<i>She started her HTML course last week.</i>

On the other hand, **irregular verbs** are those that don't follow a specific spelling rule, so you need to learn their past form by heart.

Take a look at the following chart to see some examples:

Verb	Verb in Past	Example
Go	Went	<i>I went to my HTML course yesterday.</i>
Take	Took	<i>He took things from different web pages and included them in his.</i>
Make	Made	<i>He made a really nice web page.</i>

Negative Statements

To create **negative statement**, you need to use the auxiliary verb **did not (didn't)** for all the subjects. Remember that since we use the auxiliary verb, it is not necessary to put the verb in its past form.

Let's see some examples:

Verb	Example
Go	<i>I didn't go to my HTML course yesterday.</i>
Take	<i>He didn't take things from different web pages and included them in his.</i>
Make	<i>He didn't make a really nice web page.</i>

Examples

- *Last class, we talked about something very important.*
- *I didn't write down all the HTML tags on my notebook.*
- *I also found that we can complement HTML tags with something called Cascading Style Sheets or CSS.*

Learning Points

Tags and Their Description

When we use HTML, we need to use tags to adjust the text in the way we want.

Even if there are lots of tags used by programmers, you will see some of the most used in the chart below.

Tag	Description
<h1>	Heading tag
<p>	Paragraph tag

	Line break tag
<center>	Centering content
<hr>	Horizontal lines
<audio>	Sound content
	Bold text
<button>	Push botton
	Deleted text
	Emphasized text
	Specifies text font, size, and color.
<link>	Resource reference
<video>	Video content
<time>	Date and time details
<title>	Document title
	Strong text
<spacer>	White space
